PRODUCT DETAILS

Bamboo is the fastest growing plant on earth, with a tensile strength comparable to steel. Despite being categorized as a "Wood Level", bamboo is actually a grass, not a wood, and it grows in specific climates all over the world. Made into carpenter, mason and bricklayer levels, it is strong, durable, tough and sustainable. For these reasons, bamboo is rapidly becoming one of the most popular types of residential and commercial raw materials in use today.

Models: 1601-2400 (24" Bamboo Level), 1601-4800 (48" Bamboo Level)
