### Product Guidelines

The level of noise entering a person's ear, when hearing protection is worn as directed is closely approximated by the difference between the A-weighted environmental level and the NRR.

- Example:
1. The environmental noise level at the ear is 92 dB(A).
  2. The NRR is 32 decibels (dB).
  3. The level of noise entering the ear is approximately equal to 60 dB(A).
