

## Suunto Compass KB-14/360R

Suunto bearing compasses are designed to combine extreme accuracy with ease and speed of operation. The accuracy is  $1/3^\circ$ , graduation  $1/2^\circ$  and the compass weighs only 115 g. The flat, compact housing has no protruding or adjustable parts and are designed to stand up to heavy-duty wear. The compasses are water resistant.

The cards of these compasses are immersed in a special dampening fluid that ensures vibrationless, smooth movement. They are pivoted on polished sapphire tips. The veering assembly is to all intents and purposes subject to no wear and the liquid remains clear and its viscosity low under all conditions.

The compasses have been given permanent anti-static treatment. The lens apertures of the Suunto KB-14 and KB-20 types are restricted horizontally by a column, which automatically centres the eye on the optical axis, thus eliminating parallax.

### *Product Features*

- High accuracy - precise readings in seconds
- Durable aluminium housing - protects against impact, corrosion and water
- Individually calibrated
- Optical adjustment for reading
- KB-14/360 R: 0 -  $360^\circ$  with reverse scale
