

## BLACKCRAFT mallet with ergonomic, anti-slip and break-proof steel tube handle

3379.040

### Product Description

The head of the SUPERCRAFT mallet is filled with steel shot. This means that when the workpiece is impacted, the energy of the shot is transferred with a slight delay. The reduced rebound allows the impact energy to be absorbed, resulting in extremely powerful impact without vibration which is much easier on your joints. Additionally, an advantage over steel mallets is the reduced noise level.

### Application Areas

Assembly and repair work in the automotive and truck sector, car body work, dent removal, positioning and adjusting of workpieces, straightening work, sheet-metal working, maintenance, repair and overhaul work, working on components with sensitive surfaces

Hammer head integrated in a robust fully covering polyurethane coating, completely robot-welded, protects the workpiece and prevents scratches as well as sparking in case of failures, high corrosion protection

### Material

- Steel tube handle with all-around polyurethane coating, with ergonomic rubber grip
